I. Understanding Basic Patient Care:

This segment of the test focuses on the elementary principles of patient care. Expect questions on essential signs monitoring (temperature, pulse, respiration, blood pressure), proper sanitation, and understanding and executing infection management procedures. The test may also include scenarios requiring critical thinking skills, such as responding to an abrupt change in a patient's condition. For instance, a question might present a scenario where a patient exhibits symptoms of a potential fall and ask how you would act and relay it. Answering such questions necessitates demonstrating a profound understanding of safety procedures and urgent response protocols.

II. Personal Care Assistance:

A significant part of the test evaluates your understanding of assisting patients with their daily routines (ADLs). This entails questions on assisting with bathing, dressing, grooming, toileting, and ambulation. Understanding the legal and ethical consequences of medication mismanagement is also a key element. Precise record-keeping and documentation are critical, and the test may assess your understanding of these procedures.

IV. Home Safety and Infection Control:
