FAQ:

Q1: What is the difference between debit and credit in accounting?

A1: In double-entry bookkeeping, debits and credits are used to record transactions. Debits increase the balance of asset, expense, and dividend accounts, while they decrease the balance of liability, owner's equity, and revenue accounts. Credits

increase the balance of liability, owner's equity, and revenue accounts, while they decrease the balance of asset, expense, and dividend accounts. The fundamental principle is that every transaction affects at least two accounts, with the total debits always equaling the total credits. Afzal's book provides numerous examples to clarify this.

Q2: What are the three main financial statements?

A2: The three primary financial statements are the income statement, the balance sheet, and the statement of cash flows. The income statement shows a company's revenues and expenses over a period of time, resulting in net income or net loss. The balance sheet presents a snapshot of a company's assets, liabilities, and equity at a specific point in time. The statement of cash flows tracks the movement of cash both into and out of a company during a specific period. Afzal's book provides detailed explanations and examples of each.

Q3: What is the accounting equation, and why is it important?

A3: The accounting equation is $\text{Assets} = \text{Liabilities} + \text{Equity}$. It's a fundamental principle stating that a company's assets are always equal to the sum of its liabilities and equity. This equation helps to ensure that the accounting records are balanced and accurate. Any transaction affects at least two of these components, maintaining the balance.

Q4: How does this book compare to other introductory accounting textbooks?

A4: While comparisons to other texts require direct examination, Afzal's book is generally praised for its clear and concise explanations, making complex accounting concepts more accessible to beginners. The incorporation of real-world examples strengthens the understanding and application of

concepts.
