This section of our de facto Jura Ena 5 repair manual focuses on common issues and their solutions. Many problems can be resolved with simple troubleshooting steps, preventing the need for expensive professional repairs.

Brewing Issues:

- **Weak Coffee:** This often points to a clogged brew group, insufficient coffee grounds, or a problem with the pump. Check the brew group for coffee residue and clean it thoroughly. Ensure you are using the correct coffee grind size and quantity. If the problem persists, consider examining the pump for blockages. A dedicated Jura Ena 5 service manual will provide detailed instructions for accessing and cleaning these components.
