FAQ

Q1: What are the most common symptoms of foodborne illness?

A1: Symptoms vary depending on the pathogen, but common signs include nausea, vomiting, diarrhea, abdominal cramps, fever, and headache. In severe cases, foodborne illnesses can lead to dehydration, sepsis, and even death. The handbook would provide a detailed chart matching symptoms to potential pathogens, aiding in diagnosis and appropriate action.

Q2: How can I prevent foodborne illness at home?
